A Sheep-Shearing Machine

Our foreign exchanges contain ecounts of the trial of a sheepshearing machine in Australia that it is stated, proved quite successful. It is predicted that this machine will come into general use there where such large flocks are

raised. The following gives some particulars that will prove of in-

For some weeks back various statements, couched in more or less vague terms, have been going the round of the agricultural papers respecting a new sheep-shearing machine, which was said to be capable of shearing 10,000 sheep per day. Flock-masters in general received these statements with a very considerable grain of salt, for, although the present is an age of inventive wonders, yet practical men were inclined to think that such statements almost defied besuch statements almost defied be-lief. It appears, however, that the capabilities of this new invention capabilities of this new invention have by no means been overstated. The machine consists of a length of shafting facing the shearing floor, driven by a small engine. On this shafting and five feet apart are cast-iron wheels two feet in diameter, each wheel having one side of its flange slightly beveled. Six feet six inches above the shearing floor, and attached to each post by back screws, and five feet apart, is a cast-iron bracket with an exis a cast-iron bracket with an ex-

tension of three feet of light angle iron. On each bracket is a small leather wheel four inches in diam-eter, with a bevel of one and a half inches, corresponding to the bevel of the iron wheel above. This wheel, which rotates on a spindle, is formed by compressing several layers of leather between brass plates. On the end of the spindle is a steel hook, and outside the is a steel hook, and outside the bearing is screwed a brass coupling which is attached to a flexible tube eix feet six inches long. Inside this tube is a piece of round gut half an inch in diameter, with a hook at one end and an eye at the other. The eye is placed in the hook at the end of the spindle carrying the small leather friction rying the small leather friction wheel, and the hook is placed in the eye at the end of the universal joint forming part of the shearing machine. The connection is made complete by a thin brass coupling slipping over a light brass ferule on the end of the flexible tube and screwed to the end of the universal joint. By pulling a small cord hanging from the bracket a spring liberates the catch, and instantly the bevel leather-wheel is pushed into position and contact with the bevel of the iron wheel revolving on the shaft, and thus it communiniger is agent for these celebrated "Abietine Remedies" and he offers to return your money if they do not give satisfaction. In buying, be sure the fac-simile signature of D. F. Fryer is on each, as none are genuine without it. the fork with cutter attached at the end to reciprocate over the comb, and as the comb is pushed into the wool, so does the small cutter cut. An eight-horse power engine will drive 100 shears, one man attending each and their con-

gence can learn to work them in a few hours. The time required for the shearing of one sheep is from 3 1-2 to 5 minutes. The Melbourne Australasian, from which the above particulars are taken states that Mr. Wolseley's are taken states that Mr. Wolseley's sheep-shearing machine was lately tested as against an experienced hand-shearer in presence of a large gathering of flock-masters and wool brokers. The sheep selected for the occasion were a very difficult lot to shear, being thick in the wool very low in condition the wool, very low in condition, and the wool on the majority of them was full of sand. The trial was for half a dozen sheep each, and the hand-shearer got through Always have added their test many as second by Observance of the second property of the sec

THE Autumn business at the Bay is reported on smally active. Almost all lines of goo is are moving freely, thought some are quiet. Building materials, provisions and household goods flud free buyers among the Eastern people now settling all over California. Most of this season's activity in trade 4s directly traceable to this Eastern Immigraheat, but the coast steamers have proven too few to handle the business offered them, and extra vessels have been pressed into service. Ships in the wheat trade and other deep-water service, however, are

GERMANY in likely to be divided against itself on the subject of Prince Fritz's cancer. It is a grievous calamity to the nation to see the heir apparent to the great throne of the empire in the agony of slow death. Friz is a gallant gentleman, a fine soldier, a generous foe, and a man who, crowne !, would be every inch a king. He has had an experience of war that

railroads throughout the Territory can, however, ultimately have but one effect, and General Sheridan is of the opinion that Congress may well consider the advisability of opening up the reservation, at least of this country, to settlement.

COMMISSIONER SPARKS, of the General Land Office, sent his reply to Secretary Lamar's letter Tuesday, and tendered his resignation to the President yesterday afternoon. There is no doubt but that his resignation will be accepted, and the moderate tone of the Commissloner's letter leads to the opinion that General Sparks will be offered another position under the administration. It was generally believed that Sparks would cross swords in carnest with Lamar, but he did not seelfit toolo so.

WE live in a singular sort of time. Herr Most Arrested. NEW YORK, Nov. 17 .- Herr Most traceable to this Eastern Immigration. The exports and imports are unusually large, and the shipments of California produce overland in October were the heaviest ever known in that menth. The overland railroads are hard pushed to accommodate the unprecedented passenger and freight business, and the population of the State is rapidly increasing. In fact, the Fall trade is undendtedly the heaviest ever known in California. Not only are the railroads kept in a fever heat, but the coast steamers have has been arrested and taken to the po-

was made returnable before Justice Cowing in court.

As early as last Wednesday Superintendent Murray intimated to his captains that they should take particular pains in watching the movements of the Anarchists in this city, and especially during the excitement attending the hanging of the Anarchists in Chicago on Friday and their funeral of Sunday. Thursday night occurred the parade of the "Reds," and then all of the reserves were on duty late that night. Superintendent Murray issued special orders to captains to follow all the movements of all the Anarchists and report to him any meeting they were likely to hold. Saturday night a wake was to be held by the Anarchists in Florence Hall in Second Avenue, but Captain McCulloch succeeded in getting his officers there before the Socialists arrived and made it decidedly uncomfortable for the malconteuts. But while this was going on Johann Most, with his companion, Lena Fisher, was attending an Anarchist meeting in Seventh street.

EXECUTIVE MANSION, WASHINGTON, D. C., November 17, 1887.

Hon. A. J., Sparks—My Dear Sir!—I have read your letter of resignation, left with me to-day, and also the communication addressed by you to the Secretary of the Interior accompanying the same. In the present situation I do not feel called upon to determine the merits of the controversy, which have arisen between the Secretary and yourself, farther than to say that my impressions touching the legal question involved incline to rely, as I naturally would do even if I had not an limpression of my own, upon the judgment of the Secretary. It presents the case of lutermellation where two perfectly honest men may well differ as to the operations of the Land Department, and your zealous endeavor to save and protect public lands for settlers in good faith induces me to believe that you will be pleased to receive the assurance that this policy, upon which we are all agreed, will continue to be steadfastly pursued, limited and con rolled, however, by law and the judgment of the courts by which we may at times un willingly restrain, but which we cannot and ought not to resist. I desire to heartily acknowledge the value of your service in the improved administration of the Land Depart ent, which has been reached, and to assure you of my appreciation of the rugged and unyielding integrity which has characterized your official conduct. I am constrained to accept the resignation you tender with assurances of my continued kindly feeling toward you and with an earnest wish that whereever your future way of life may lead complete success and satisfaction may await you. Thanking you fur the pleasing and complimentary expressions with which you close you letter, I am, yours very truly, (Signed:) Grover Cleveland.

PRACTICAL BOOMING.

to Add to Its Population.

A. L. Shinn, who is evidently the boss boomer of Lassen county, Cal., returned yesterday from San Francisco, where he went for the purpose of enlisting capital to develop the latent resources of his county. He reports that his mission was successful, and speaks enthusiastically of the outlook. The project on which he is now engaged is the irrigating of Secret Valley, now barren, situated about 30 miles from Susanville, and adjoining Honey Lake Valley on the west end. The company, recently formed, will commence active operformed, will commence active operations at once, and by next Summer it expects to be able to irrigate 15,000 acres of land. To effect this desirable end three reservoirs will be constructed in the mountains surrounding the valley, in which the waters which now rut to waste will be kept until needed. It is the intention of the company, has soon as everything is in working order, to subdivide the property integrall tracts, when they will be placed on the market and inducements offered to settlers to locate there. The soil of the valley is said to be unexcelled for agricultural purpose, and with water can furnish farms sufficient for three hundred settlers. Mr. Shinn also states that what Mr. Shinn also states that what can be accomplished in Secret Valley can also be accomplished in every uncultivated valley in northern California, and that it is the intention of the capitalists interested to push the good work of ested to push the good work of erecting reservoirs wherever they

can acquire land.

This is what the GAZETTE calls practical booming, and it is just such enterprises which are needed to bring Nevada lands to the front. Reservoirs will prove our salvation. With them Nevada products will place her in the front rank of the galaxy of States; without them, the State will continue to rema n in the rut the silurians and moss-backs have placed her, and from which it seems she will never emerge unless the problem of water storage is solved.

Senator Stewart on Immigration, The Executive Committe of the California Board of Trade met in its new quarters on Second street, San Francisco, Tuesday afternoon. A.

T. Hatch, of Sulsun, presided. There was a large attendance. Beside members there were several side memoers there were several visitors, among them Senator Wm. Stewart, of this State. In a brief address he said he heartily approved of what the Board is doing. He said that he and others came to California at first to mine, and thought little or nothing of the said. California at first to mine, and thought little or nothing of the agricultural resources. Since then the wonderful capability of the State had been learned. California has the capability of supporting fully three millions of people when all; under cultivation. There are many people coming here and all want to know about the State. The State. In the Senator's judgment, is State, in the Senator's judgment, is now on the eve of another '49—not a '49 of mining, but of agriculture. Many who go there go away seeing nothing but a fog about the Cliff House, and this Board can act as a high immigration association, and big immigration association, and tell people just where to go and all about the localities inquired about. He wished the Board every success in its work.

things, viz.: 1st, that your nerves are weak; 2d, that you need a tonic; 3d, that its name is Hostetter's Stomach Bitters, the promptest, safest, most popular article of its class. The nerves are susceptible of invigoration only by promoting an increase of vigor in the processes of digestion and invigoration. Narbotics and sedatives have their utility, but in the main, and if their use be continued, they are unsafe. A wineglass of the Bitters before retiring, and a repetition of the same during the day before or after meals, is far more likely to confer healthyielding sleep than repeated doses of an opiate. Dyspepsia, debility, inactivity of the kidneys and biadder, fever and ague, and other malarial complaints, are always dominated and subdued by it.

A Valuable Remedy.

Numorous testimonials prove be yond a doubt that Allcock's Porous Plasters cure paralysis, nervous de bility and loss of memory when applied to the spine. They remove kidpiled to the spine. They remove kidney difficulties when worn on the small of the back; applied to the pit of the stomach, dyspepsia and indigestion disappear. Colds, coughs and asthma no longer trouble the suffering patient when he uses them on the chest. If you have a headache or want to sleep, put an Alloock's Porous Plaster on the pape of the neck—the work is not only done, but well done.

A Boon for Travelers. is but one place in the United States where guncotton is manufactured, but such is the case. This is at the torpedo station in Newport Harbor. In the manufacture of guncotton the best cotton waste and the strongest and purest nitric and sulphuric acids are used for the explosive. The cotton waste after it has been handpicked for the purpose of removing the dirt and grit, is placed in boiling tanks, where it is allowed to remain for four hours. It is afterward subjected to a thorough washing and is reboiled. The operation removes all oily matter and leaves the cotton harsh and stiff. It is then dried in the rooms heated with the waste air from a drying box. After undergoing this treatment the cotten rolls up into snarls and bunches, and in order that the acid may have a freerer access to it it is passed through a shred-BUILDING MATERIAL and MILL WORK of all Kinds. INFANTILE SKIN DISEASES

Our oldest child, now six years of age, ween an infant six months old was atta Red with a virulent, m-lignant skin disease. All ordinary remedies failing, we called our ismily physician, who attempt d to cure it; but it spread with almost incredible rapidity, until the lower portion of the little fellow's person, fr m the middle of his back down to his knees, was one solid resh, ugly, painful, bloteed, and malicious. We had no rest at night, no peace by day. Finally, we were advised to try the Cuticura Ramedies. The effect was simply marvell sus Intree or four weeks a complete cure was wrought, leaving the little fellow's person as white and healthy as though he had never been attacked. In my opinion your valuable remedies saved his life, and to-d ty be is a strong, healthy child, per ectly well, no repetition of the disease having ever occurred.

This would make one of the best stock ranges in the state. THE BIGGS & FARIS RANCH. Price, \$15,000. Easy terms of payment Solution of payment gives. Solution and ferror in the control of One of the Finest Bodies of Land

in California. THIS PROPERTY CONSISTS OF 1.937 ACRES OF LAND SITUATED IN BUTTE A County, Cal.. 73 miles nor h of Sacram nto. The land lies one and a half miles along Feather + iver. o.e of the larvest rivers in California, and runs thence we terly for from a mile to two and a half miles. Or e indo the land besone and a half miles of the town of Biggs; the central part lies within the tree miles of the flow ishing town of Giddley. B th towns are on the California & Oregon Railroad, the through line from san Francisco to Portland, Oregon.

The county road from Gridley to Vrovilla passes through the land. It is an exceedingly rich situated from the Feather River, sithous hirrigation is not necessary, as crops without irrigation have been raised succe sfully for wenty five years. There are 200 acres of fow hill land, which is mest exceedingly for twenty five years. There are 200 acres of fow hill land, which is mest exceeding thirty-six feet in circumference four feet from the ground.

The wood alone is very valuable, it being estimated that if cut into cordwood it could be readily sold for the total sum of \$40,000.

The land is all cuttivated and produces thirty-five bushels of wheat, or sixteen sacks, to the acre, and fifty businels of bales. It will raise without crugation eight tons of alfalfa to the acre. The land is within the citrus beit, and all kinds of citrus and deciduous fruits do well.

This is the best fruit land in the State of California and should be devoted to that purpose. There is a two-story nouse, also barns and outbuildings on the place as well as two small orchards.

The total year from this place in grains, fruit and pasturage has been 40 ACRES OF LAND; 26 acres in alfalfa; 1,750 forest trees, all under fence, situate 34 mile from railroad depot, R ao. Roll -1 nd, beautifully situated for residences.

POLSALE-House and lot on east side of Virginia street, one door north of fourth street; fot 50 by 140; house of five rooms. A very desirable locality.

POR SALE—Lot 129.5 ft. by 140 ft., on east side of Virginia street, optosite residence of B F. Leete. This is a very desirable piece of property.

Also several large properties in Truckee teadows; properties at Stockton, San well as two small orchards.

The total yie of this year from this place in grains, fruit and pasturage has been about \$45,000. The owners have realized from rents alone \$16,000 this year.

It lies well for cutting up into small traces. It can be cut into 80-acre tracts, which will sell readily at \$100 per acre. If colonized and cut into smaller tracts we believe it could be sold for double that amount.

Title perfect—c nfirmed Sponish grant of 30 years. This property is for sale at \$145,000; one-third cash, balance one, two and three years at 8 per cent.

Similar land in this vicinity is rated at \$100 per acre. Mines bought and sold. The firm has numerous correspondents who are dealers to mining property.

The charges, therefore, are taken one by one and placed in an acid wringer and plunged into a large tub which is kept filled with running water, in which a large wheel is rapidly turned in order to subject the cotton to a thorough washing. This latter process is continued till no acid is perceptible to the taste. It is then subjected to a still further washing and boiling in an alkaline mixture, this being necessary to remove every being necessary to remove every trace of acid. The cotton is now in long shreds and balls, which can be used or stored without danger, the processes of conversion and cleansing being completed, but for military use it must be put into a more com-

use it must be put into a more compact form. For this purpose the guncotton in charges of 300 pounds is thrown into a pulping tub, where, mixed with water, it is ground by steel cutters into a fine puip. The grinding and breaking up of the cellular tissue of the cotton has made it more or less dirty, and it is necessary, therefore, to expose it to frequent washings in the poaching tubs, from which, after treating it with lime water to make the moisture slightly alkaline, it is drawn up into a large iron tank, where it is fed to the molds, which under a moderate pressure, press the water from the pulp and trim out cylinders of cotton about eight inches high and three and a half inches in diameter.
